

results online®

Results ONLINE® is an online data management system that is available 24/7, readily understood, and easy to use.

Outcome-based evaluation is a systematic way to measure a program's results.

Results ONLINE® is a web-based outcomes measurement system and project community. It is intended to bring together individuals who are working on similar projects in different locations, with similar outcomes, into one common environment.

The purpose of this community of practice is to collect data on program activities including:

- characteristics of persons attending the program;
- the services provided; and
- outcomes achieved.

Individual records are put into the system by local program staff; **Results ONLINE®** tabulates the results and generates desired reports. The information is stored on a secured server and names are encrypted outside of the local program area to maintain confidentiality.

Results ONLINE® is a multiple user, database system using the web as the platform to record and receive program data. The system is completely scalable and can be hosted on different servers. It is adaptable because it is only dependent upon browsers, and not proprietary software. It runs on public domain software, PHP and MYSQL.

“Give us the tools and we'll finish the job.”
— Winston Churchill
